SERVICE BROCHURE

Private AI hosting

For businesses with private records: your data stays on servers you control.

11:20 am A file too private to send

6 AM 12 PM 6 PM 12 AM 6 AM

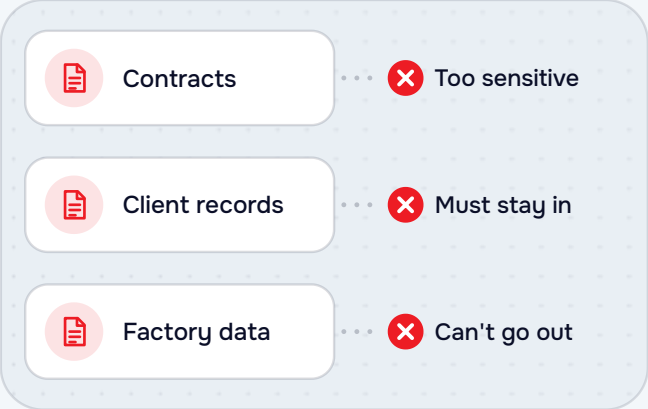
Who it is for

Medium and large businesses whose work involves private customer records, contracts, manuals, financial documents or factory data that must stay under their control.

- LEGAL AND FINANCE TEAMS
- OPERATIONS TEAMS
- PLANTS AND FACTORIES

Too sensitive to send outside

- Some work, such as contracts or private customer records, is too sensitive for a public chat service.
- Paying an outside service for every request makes the cost hard to predict.
- Some work is too tied to your own systems and software for a public chat service.



BEFORE: TOO SENSITIVE, TOO COSTLY, TOO TIED IN

What we set up

We set up proven open models on your own servers or in a private cloud, shape them to your work and connect them to the software you already use. A person in your team stays in charge of what goes out.

Own servers or private cloud

Inside your network, or a cloud account set aside for you. Both can keep data under your control.

One job to start with

Such as reading invoices, answering from your manuals, call notes, translation or checking photos from a line.

Connected to your software

It works with the files and software you choose, and reads only what you allow.

How it works

TOGETHER

1 2 3 4

TOGETHER

We pick one job

We look at where work piles up and choose one job with clear inputs, clear outputs and a person to review it.

TOGETHER

We agree on the setup

Your own servers or a private cloud, what data it can see, and what it must never do.

TOGETHER

We build and test with your team

We connect the model to your files or software, test it on real examples and adjust it with the people who will use it.

TOGETHER

We go live with a person in charge

Your team approves outputs in the early period. We keep a record of what the system did and adjust the setup as the work needs.

What you get

- ✓ A private setup on your own servers or in a private cloud
- ✓ Proven open models shaped to your work
- ✓ A connection to the software and files you choose
- ✓ A written quote that names the model and its licence
- ✓ A record of what the system did
- ✓ A clear review step before outputs are used or sent

What we need from you

- One job to start with, and the person who owns that job
- Access to the files, software or systems involved
- Examples of good outputs and common mistakes
- A named person who will review the early results
- Your rules for data access, retention and approval

Timeline We quote every setup in writing after a free consultation.

You stay in control

Check it, pause it or stop it at any time.

Your team reviews outputs

A named person in your team reviews outputs before they are used, sent or filed.

Anything unusual goes to a person

That includes anything unclear or outside the agreed job. It goes to a named person.

Every action is recorded

Your team can check what happened.

Pause, limit or switch it off

You can pause the system, limit it or switch it off at any time.

Questions people ask

Where does our data go?

It stays on your own servers or in the private cloud you choose. Your files and records are not sent to a public chat service.

Which model do you use?

The best proven open model for your job, shaped to your work. If it needs a paid licence, we arrange it and show the fee in the quote.

What hardware do we need?

We start with small models on modest hardware where that fits the job, and advise you after looking at what you already have.

What does it never do?

It does not decide on hiring, lending or medical care, and it does not control a machine or any safety-critical system.

Tell us which job you want private

Say where the data lives today and who would review the output. We will help you decide whether your own servers or a private cloud comes first.

Every setup is quoted in writing after a free consultation, naming the model, its licence and any licence fee.
